Hi,

I have a system which connects to BARCO monitor CD651 as display (using BNC). I am wondering if the display breaks down and I do not have a spare BARCO monitor, can I use a laptop screen as a stand in? My limitation is that I cannot add additional hardware or software to the system that support multi-monitor functions as I do not have the authority to modify the system. My only input is the video signal that is originally supplied to the BARCO monitor. Is there any hardware or software available that I can install in the laptop to make it as a secondary display? Rgds.

.
