That's a CTC-169. It is a good chassis, a bit old now. Was the picture good, and did everything else work well before it developed the problem? The good news is...you don't have to remove the entire set. The internal light box, 70 pounds or so, is removeable, so a technician can simply come to your house and remove the chassis, take it to the shop, repair it, and return it. This chassis can be a bear to troubleshoot if you don't have the pertinent service information available, though.

Tom
