Actually, I didn't. I don't think anything is ruined. There doesn't seem to be any chips on the board and the coils look fine, the ones I see anyway. I have taken a photo and posted it, if anyone would take a look and let me know what they think the extent of the damage is:

http://home.comcast.net/~fybar/TV_034.jpg

I could take more or answer questions about what is there. Thanks again to all who have posted,

fybar

Oh, yeah that just ripped the connector out, should be pretty easy to fix it with a connector from any junked set.

.
