Hi,

Depends on the tool. I was able to get replacement batteries for a Black&Decker cordless, right from a B&D store and at a very reasonable price.

Hard to believe, in these days of either ripoff or throwaway designs.

Is there a source for NiCad batteries with solder tabs that would be suitable for rebuilding tool battery packs? The cells are about 1 5/8" x 7/8" and probably 2100mAHr.
