This model seems to be out of date. I have the base/handset, plus an auxiliary handset for the bedroom. The base handset, the LCD seems to be failing, and the battery doesn't last that long, and sometimes the phone seems to disconnect while I'm on it. This does not happen with the newer, auxiliary handset. But I can't find the battery for this model—at least not on the common internet sites selling batteries. I really don't know what to do. Thanx. It's a 3.6 v 800 mAh whatever that means, it looks like there are 3 long skinny batteries inside this green plastic casing.
