Thanks for that, Jerry. I would have hoped that the explanation of the early symptoms would have triggered some light bulb somewhere, but you're probably right in saying that not going in standby could have many reasons. Buying the service manual is probably not going to be economical for one (10yo) set, because I fear that these "official" manuals don't do much hand holding and that my limited knowledge and tools might not be enough get any where.

Cheers,

Ludo.
