dauidlaska ha escrito:

I read Sam's stuff on 'slight jitter in TV picture' but I do not have a grasp on it. My Mitsubishi 27 from the 80,s has a slight jitter. I noticed it when you bring up the display of setting with a blue screen. Then I was aware of it after that on regular TV. Cheap to fix or it is to be tossed like everything else these days.

post the model and chassis references, maybe someone will have a tip database on that model.
