I have a panasonic 5 cd stereo system and I have a major problem with the cd function. When it plays cds it skips really horribly. These are not burned cds, nor are they necessarily old cds. I have tried MANY brand new cds, straight out of the package, and have yet to find a cd that does not skip. Is there anything I can do to fix this problem?

I would try a good cleaning of the optics. Use isopropyl alcohol I use a stronger version at 100% than you buy for medical purposes 70%, but it would work too.

Good Luck, StarBaseONE2
