Shockjock ha escrito:

Please can anyone help, I need a diagram or any info on a Bush WS6679sil
TV
the standby light just pulses and there is a tweet tweet sound I cant
find
what chassis it is.

first things first. Have you removed the line transistor and tested the
b+? what about the power supply outputs? if all this sounds like
chinese to you then don't mess about , take it to a tech. If not, post
the results of the tests and maybe someone on here will give you some
specific pointers
-B.
