27" Magnavox stereo tv model:XS2765C106,chassis:27T104-00CC,year:Nov 1991.No power only relay click I found cracked solder joints on T501=horizontal driver transformer and a shorted HOT transistor Q502=610597=Philips # 4835 130 47897=NTE2353

From using part # lookup sites I older threads by other techs I found

that these are possible crosses:

2SD1880
2SD1879
Sanyo # 410 149 0420
Daewoo # T2SD1880
2SD1881=S2055AF
Philips # 4835 130 47897
Samsung # 0502-000209
Sanyo # 405 112 7600
RCA SK # 2SD1880=2SD2539
Generic # 2SD2539
Sears Canada # 57 533 2SD1880

I would like to know which ones are possible crosses from your experiences as I don't have the exact one (610597) in stock nor any of the above "but if I order one I don't want the tv coming back.So which is a good sub from the above list or any other good sub?.Thanks.
