A burnt CD is nothing like as reflective as a pressed CD, so any laser low-output issues, will be exacerbated with a home burn over a commercial pressing. Actually, '240s are particularly bad for not liking anything other than genuine pressed discs, and need to be in really good condition to play them successfully

Arfa

Ok. What compatible replacement laser assmebly do you reccomend? Being it's in a tray loading Sega CD, does it have to be an EXACT match? (will the Sega CD even know if the drive is changed?) Also, what replacement will accept a CD-R, the best?
