Hi;

I'm in the process of replacing electro. caps in an old Roberts Reel to Reel deck.

There are some questionable electro. caps that I'm trying to replace. These are the old "can" style caps and the color codes are written in Japanese (I believe) on the side of the can. There are 3 color dots; yellow, white and red but I don't know which value they're supposed to be as the sections all read low.

Can anyone tell from the side of the can what the designations are? If so, please take a look at the picture on my site posted.

(I promise it's spam and virus free.)

Those are the motor run capacitors. There are two separate capacitors. "X" or "Y" type capacitors would be suitable replacements.
