Hi,

The place I was buying my 5 pin potentiometers has run out. I phoned a couple of places, but they need part numbers (which I don't have and can't get from the store – they must know that I am outsourcing and there is nothing listed on the part). When I asked for a 1K potentiometer with 5 pins on the phone to Mouser and <http://www.potentiometers.com>, it was like asking if they had seen a unicorn, so I am wondering if these are rare. They told me they have lots of 3 pin, but not 5 pin.

Any ideas or places to purchase?

Thanks in advance.

Here is what is the potentiometer looks like:

<http://davidd.250free.com/resistor.gif>

I know it might not be enough to go on, but maybe someone can point me in the right direction.

Brand, part number, resistance, physical size, wattage, taper? that looks like a transistor radio volume control with a switch from the front, but you haven't given us ANYTHING to work with.

Service to my country? Been there, Done that, and I've got my DD214 to prove it.
