Does anyone know for sure who the manufacturer is, of the 2.5mm pin-pitch box connectors on the Vestel PW15 series power supplies used in many makes of LCD TV ( Hitachi, Toshiba, Sanyo etc) ? They are the type with a recess cut into one side of the box, and which take a plug with a polarising bump at each end, set the same distance apart as the recess. Large variety of 'ways' from a couple right up to 13 or more. Pins are also offset closer to one long face of the box, than the other, so this, along with the bumps and the recess, ensure that a plug can only be inserted into a socket, the right way round.

There doesn't seem to be any manufacturers name or logo on them that I can see, and although I've found some 2.5mm examples in catalogues, none that are exactly enough the same, to be useable with existing connectors.
