This is something that seems to have defeated the best minds in the UK so I thought I'd try here...;-)

I have a home assembled PC – about 18 months old – using an Asus A8N5X MB and an Athlon 64 3000+ CPU. It's mainly used for semi-pro AV work.

OK,

1. If it's a work PC meant to earn money and depreciated to nil after a moment of time – assume it's got there now and replace it.

Fine. You pay for it then. ;-)

Or ...

There will be an ASUS three year warranty on your motherboard. Contact the retailer?

It's a point. I know the CPU has a three year warranty but wasn't sure about the MB. However, the retailer says it's obsolete, so presumably can't be replaced by an identical one.
