Neighbor used to own a 66 Ventura convertible with a 352 CUI 4bbl 8 under the hood. Wish I had one sitting in my drive that was a fantastically fun car. But the Goat was my favorite muscle car followed by the Mopars.

It was red, with a black and woodgrain interior. It had the soft shell doors, and several modifications that the Pontiac garage said couldn't be done. :)

I didn't get to install it, but I built a "Factory" AM/FM/Stereo radio from Delco parts, starting with a new surplus 72 buick radio. The only thing I let slide was there was no stereo indicator in the dial. :(I even tracked down the under dash Delco 8-track tape player, with the chrome that matched the console.

I never did find out what the top end speed was. I had the speedometer off the scale more than once, and bent a push rod each time.
