Anyone know where to find the foam material that is used for filters. The kind

you would use behind computer fans and the like to catch dust. I need to make some custom filters for a few 120mm fans, Is there some place that sells it by

the sheet or rolls?

Try www.mcmaster.com Go there and search for foam air filters, or just search for foam and scroll down to foam air filters. They have polyurethane open cell foam in thicknesses from 1/8" to 2" and various cell coarsenesses (is that a word?) Sold in 48" x 72" sheets. They even have a sample pack of different coarsenesses so you can choose which you like.

They accept credit card orders from anyone and their shipping prices are VERY reasonable. And shipping is QUICK!

If you just search for foam, you'll find LOTS of possibilities, but scrolling down to foam air filters will probably get you what you want.

Re: Filter material for PC fans and cases????

You da man!!!!!!!!!!

Thank you all for helping.

Going to stop by the local Walmart and a few other local places first but may just order from here.
