I had a similar 5 year old Sonic Care brush that failed. I tried to open it, but had to resort to cutting open the case with my Dremel tool and cutting blade. It was not repairable and never intended to be opened back up after it left the factory. Good luck to you.

Only after having bought a Sonicare had I access to the manual. It says that the accumulator is not meant to be replaced and that I should safely dispose of the device after its lifes end. No need to mention that I'm foaming with anger and that that is the last product I will ever have bought from Philips.
