Samuel M. Goldwasser wrote:

And you expected them to include a service manual with schematics and step-by-step repair instructions? Of course these things are considered disposable. If the mfg. can save 0.01 cent on the cost, that's significant. It's not like they stuck a couple Alkalines and said they aren't replaceable. This is a rechargeable batter which should last a reasonable length of time.

Would you please define your phrase 'reasonable' in terms of time.

Why didn't they print onto the box  
'Usable during a period of <reasonable> <eg years>' ?

Regards,  
H.

In the end everything stops working. Nothing lasts forever.. And to that end most products don't list their MTBF on the retail package. I understand why your upset, but we live in a disposable world and thats just the way things are.
