Hi Franc. That url gets redirected to a search
site for me !

I still have no trouble with Opera or OffByOne, and I'm
positive that
the site contents are not being retrieved from my cache.

I get redirected to some damned site titled "Blogoholic.info". (Courtesy
of some entity called "searchacross.com".)

I see a reference to "Blogoholic.info" in the source code. If you can
turn off Javascript in your browser, then I believe the site should
render OK.

I highly recommend OffByOne as an alternative browser for situations

Re: Flash Memory Chip ID

like this. It is tiny, does not support JS or Java, does not use a cache, and does not write to your registry.

– Franc Zabkar

I use FF with an extension called Noscript. Javascript is off by default, but you can enable it for individual sites. Flash crap can is also controlled by site.

The Javascript controls make surfing *much* safer, while the Flash controls make surfing more pleasant.

Jerry
