I tried it last weekend, and it turned out very nice. The sound is just incredible, very rich and very full. When I added a back truss to the neck it changed the capacitance of the circuit and affected the tone, that's what prompted me to complete the string coil by connecting the back piece which is made of steel strip 2x16" bent at the end to hold the strings, connected to the neck truss via a screw through the strip, next I connected the neck truss to the strings with a copper wire, to complete the loop. I added the magnet at the base of the neck, above the pick-up.

Then I took it to the club and played with it, to hear the difference.

It sounds very good....
