Why would you want to turn a perfectly good fuel into hydrogen? Just put the ethanol in the tank and go. But where will you get the ethanol?

Run the numbers. We import 25 quads of oil a year. Crop fuels are no answer.

Why not bring up conservation. If we, (the USA), were to drive a 45 mpg fleet, (means we have to stop driving like animals), that would just about do it. We save a lot of money to boot. Ever price a fuelcell?

Best, Dan.
