I come up with the heating value of oil, pumped per day world wide, at 3.5E17 exajoules. Sulfur-iodine at 50% packing gets you 1E7 exajoules/m<sup>2</sup>/day. 35,000 km<sup>2</sup>, less than 200 km on a side. (check my numbers.)

So, why do you keep saying, 'No Way'?

Best, Dan.
