I'll be darn snookered, besides forums that suck by way of sending those warm and fuzzy malware cookies to my PC, apparently the GOOGLE V-Chip is working each and every time you so much as mention anything French, or perhaps it's working a little overtime whenever I've mentioned something DOE solar/sterling that's seemingly every bit as good/m<sup>2</sup> as the overall impact of what's typically American style nuclear, except without any of the drawbacks.

Possibly the notion of providing 6.5e9 souls each with 15+kw isn't a nice sort of topic to be sharing with such a warm and fuzzy energy pillaging community of incest cloned borgs.

BTW; for the ongoing benefit of others, and not that it matters to those without a stitch of remorse but, within my spare dyslexic time I've slightly polished my external 'gv-topics' page, and I'm working on other pages soon to be improved.

Basic township that's situated upon Venus:
