All of you know it alls that didn't believe the Hype, well, WHOOP
THERE IT IS!!!!

SHEC LABS and City of Regina Saskatchewan Are Pleased to Announce
World's First Solar Hydrogen Production Station from Landfill Gas

Download this press release as an Adobe PDF document.

The City of Regina's city council unanimously approved this
revolutionary project for the city's Fleet Street Landfill.

(PRWEB) December 7, 2005 — SHEC LABS – Solar Hydrogen Energy
Corporation, with its partners, Giffels Associates Limited (Ingenium)
and Clean 16 Environmental Technologies and in conjunction with the
University of Toronto Department of Chemical Engineering and Applied
Chemistry, will deploy the world's first Solar Hydrogen production
station using methane, an environmentally damaging greenhouse gas
expelled from our city landfills.

Snip the BS.....

Is this a joke? SOLAR HYDROGEN from methane?? Well, it is true that most
hydrogen is produced from methane (natural gas) and is used for various
industrial process including production of gasoline, aren't we told that
SOLAR hydrogen is from the sun's energy through PV-H2 or some similar
scheme?

Of course if you have methane why the hell would you waste 1/2 of its energy
to produce a much inferior fuel, hydrogen unless you needed it for
industrial processes? Why not use the methane in the first place, it's a far
superior fuel. Furthermore, using methane to produce hydrogen does nothing

Re: Raleigh, Just to follow your topic, SHEC Labs has done it again!!!!

Re: Raleigh, Just to follow your topic, SHEC Labs has done it again!!!!

to alleviate the vexing CO2 problem because the CO2 is released anyway.
Freedom from CO2 is one of the major claims for using hydrogen.
