In the case of Hydrogen the idea is to get it from H2O using a very high frequency and possible without a tank to store it.

The induction coupling of water is basically what microwave oven does. If we can tune the frequency to bring hydrogen to plasma we have a system. Basically it works when we can plate the plasma to a substrate as in the plasmionic deposition in the manufacturing of photovoltaics. But we haven't figured out how to plate Hydrogen.

<http://raenergy.iqc.org/heltank.html#induction>

Then there is Brown's gas which keeps the oxygen and Hydrogen in a compressed tank.

As for our Attack Jackals they just can't see the Solar budget seriousness. We can not burn the planet to heat it _ burning the furniture to heat the house :) Hydrogen is something that has to be made to work. it is not an economics exercise it is amoral one.

This news group is about hydrogen energy.
In general people don't try to offend you.
To be able to have a better world we need to find a way to stop using fosil fuels. The new trend indicate that we need to have new concept in relation to energy and where it will come from.
One demostrated theory has to do with the idea that space is not empty. So the energy will posible come from that aparent emtyness.
In the case of Hydrogen the idea is to get it from

Re: hydrogen myths

H₂O using a very high frequency
and possible without a tank to store it. But in a
very cheap way.

This seems like a dream. Without a dream we will
not develop the technology.

A positive contribution to inform and come up with
ideas

I think will be
