What the heck has this to do with Hydrogen and why are you bothering us with OT drivell that is not only cross posted but also could be better addressed in groups that would give a rat's ass about it.

Dr. Keith Baverstock exposed a World Health Organization (WHO) cover-up on depleted uranium in an Aljazeera article, "Washington's Secret Nuclear War" posted on September 14, 2004. It was the most popular article ever posted on the Aljazeera English language website . Baverstock leaked an official WHO report that he wrote, to the media several years ago after the WHO refused to publish it. He warned in the report about the mobility of, and environmental contamination from, tiny depleted uranium particles formed from US munitions. Busby's ECRR report challenged the International Committee on Radiation Protection (ICRP) standards for radiation risk, and reported that the mutagenic effects of radiation determined by Chernobyl studies are actually 1000 times higher than the ICRP risk model predicts. The ECRR report also establishes that the ICRP risk model, based on external exposure of Hiroshima and Nagasaki victims, and the ECRR risk model, based on internal exposure, are mutually exclusive models. In other words, the ICRP risk model based on external exposure cannot be used to estimate internal exposure risk. The report also states that a separate study is needed for depleted uranium exposure risks, because it may be far more toxic than nuclear weapons or nuclear power plant exposures. In July of 2005, the National Academy of Sciences reported in their new BEIR VII report on low level radiation, that there is "no safe level of exposure". The report also finally admitted that very low levels are more harmful per unit of radiation than higher levels of exposure, also known as the "supralinear" effect.

This is extremely alarming information on low level radiation risk, since the AWE data from Aldermaston confirms that rapid global

Re: Pissing in the Nest

transport of depleted uranium dust is occurring. Dr. Katsuma Yagasaki, a Japanese physicist at the University of the Ryukyus in Okinawa, has estimated that the atomicity equivalent of at least 400,000 Nagasaki bombs has been released into the global atmosphere since 1991, from the use of depleted uranium munitions. It is completely mixed in the atmosphere in one year. The "smog of war" from Gulf War I was found in glaciers and ice sheets globally a year later. Even more alarming is the non-specific catalytic or enzyme effect from internal exposures to nanoparticles of depleted uranium. Soldiers on depleted uranium battlefields have reported that, after noticing a metallic taste in their mouths, within 24–48 hours of exposure they became sick with Gulf War syndrome symptoms.

Who is profiting from this global uranium nightmare? Dr. Jay Gould revealed in his book *THE ENEMY WITHIN*, that the British Royal family privately owns investments in uranium holdings worth over \$6 billion through Rio Tinto Mines. The mining company was formed for the British Royal family in the late 1950's by Roland Walter "Tiny" Rowland, the Queen's buccaneer. Born in 1917 through illegitimate German parentage, and before changing his name, Roland Walter Fuhrhop was a passionate member of the Nazi youth movement by 1933, and a classmate described him as "...an ardent supporter of Hitler and an arrogant, nasty piece of work to boot." His meteoric rise and protection by intel agencies and the British Crown are an indication of what an asset he has been for decades to the Queen, as Africa's most powerful Western businessman. Africa and Australia are two of the main sources of uranium in the world. The Rothschilds control uranium supplies and prices globally, and one serves as the Queen's business manager. Filmmaker David Bradbury made *BLOWIN' IN THE WIND* to expose depleted uranium bombing and gunnery range activities contaminating pristine areas of eastern Australia, and to expose plans to extract over \$36 billion in uranium from mines in the interior over the next 6 years. Halliburton has finished construction of a 1000 mile railway from the mining area to a port on the north coast of Australia to transport the ore. The Queen's favorite American buccaneers, Cheney, Halliburton, and the Bush family, are tied to her through uranium mining and the shared use of illegal depleted uranium munitions in the Middle East, Central Asia and Kosovo/Bosnia. The major roles that such diverse individuals and groups as the Carlyle Group, George Herbert Walker Bush, former Carlyle CEO Frank Calucci, the University of California managed nuclear weapons labs at Los Alamos and Livermore, and US and international pension fund investments have played in proliferating depleted uranium weapons is not well known or in most instances even recognized, inside or outside the country.

God Save The Queen from the guilt of her complicity in turning Planet Earth into a 'Death Star'.
