"Don Widders" <[widders@xxxxxxxxxxxx](mailto:widders@xxxxxxxxxxxx)> writes:

How is it that a person who will not tell an out-and-out lie can be married to such a foolish idea as electrolytically produced hydrogen that he would spend hours regurgitating the propaganda of the DOE to try and convince somebody (ANYBODY) that such silliness makes sense? Hydrogen proponents

There's a theory that says that the less proficient you are at a subject, the more likely you are to overestimate your own proficiency. Most of the nutbars you get here have just enough proficiency in their fields to think that they know all of it.

Don says the same thing in a different way in a lot of his articles – inventors are usually people who have no idea where the start of the art actually is. \*
