Don, you'll get no disagreement from me for anything in that post.

I am a bit sensitive about "There are scientists and engineers that know the truth and speak propaganda because it's their job", simply because just about anyone who has advanced his/her career in science and engineering has faces the choice of doing this or having their family face hardship. That's simply the way it is until your children are raised, educated, and independent, and you can live on a fraction of the income you once earned and say or post what you really believe up to a limit.

Remember the old movies line, regarding the chasm that exists between what is said and what is done!

You cannot do this when your income derives from the DOD, DOT, DOE, NASA, or any of their contractors because if you do, that will be the end of your career. In extreme cases, individuals have been actually known to simply vanish. I suspect the same is true of professionals employed by the major automobile firms, since big bucks are involved in endorsing the company line.

Harry C.

That's something to think about, Harry! I've never worked for any government agency during my career and I don't recall witnessing a situation where personal integrity was compromised to the degree of mapping out a 'roadmap to a hydrogen economy' for the President of the U.S. knowing full well the whole concept is bogus. Call me naive, but I really thought that stuff only happened in Hollywood.

Could there be any 'urban legend' or myth greater than the hydrogen economy?

Don W.
