It is interesting to not that not one of the global warming proponents has produced any global warming numbers for analysis. Don't know about you readers of this newsgroup, but given the PR on global warming, I would have expected someone to step forth and present the numbers that support the concept of global warming. I suppose I'm odd, in wanting to know what the known facts are.

I suppose that I'm on my own in this regard, wanting to know what the facts are and not simply arm waving claims, so I'll probably begin cross-posting onto some of the environmental newsgroups. Then too, I suspect that will only get me flames, without providing any insight at all into the facts. In fact, I plan to do just that, prompted by the amount of hate mail I have received to date. evidently the 'global warming crowd' does not like to have their conclusions and beliefs questioned on a scientific basis, similiar to the UFO crowd and the ridiculous conspiracy theory people. I must remind these guys that what you believe may or may not be scientific fact.

Considering that I don't publish on Usenet using my current email address (to avoid spam), it is amazing to me how many people ---

that would be a big goose egg, I suspect ...

... have dug
up my current email address to admonish me on my efforts.
