IDIOT.

Low cost hydrogen isn't here, never mind 'to stay'.

I am writing contracts today with folks to buy hydrogen.

Writing contracts is NOT the same as *making* hydrogen.

Please see <http://www.usoal.com>

The cost is \$800

Cost per WHAT ?

Re: Low Cost Hydrogen is here to stay

metric ton

– which is lower cost than humanity now pays for carbon fuels on a heat value basis.

Without a 'per what', the figure is entirely meaningless.

Graham

Obviously, per metric ton.

Not obvious at all. Americans use all manner of weird measures like BTUs. It might have been per megabushel for all I know.

Why not US tons btw since you're intending to sell in the USA.?

How many tons of *electrolytically manufactured* hydrogen have you sold to date ?

Graham!

.
