The world burns 28.3 billion barrels of oil per year
The world burns 5.5 billion tons of coal per year.
The world burns 2.2 billion tons of natural gas per year

This may all be replaced with 3.34 billion tons of hydrogen
made from 30 billion tons of water
and 500 billion MWh of DC electricity made from sunlight.

You're beginning to sound like habshi.

Graham

I do not know who habshi is. I have the technical and financial
resources to back me up. Does he?
