No I only said you haven't shown *me* proof that you did the work you said you did. That is a very different thing.

How is publishing something in a patent – that is available to the public generally – not showing you something? You are the public and have access to it, therefore I have shown it to you. Furthermore, I have asked you to complete a contact screen on my website to receive additional information. Obviously you are the one choosing not to gather relevant information before making conclusions about it. Clearly you do this because you have your own agenda independent of the relevant data.

<SNIP> Remaining Bullshit

Sure Bill, I'm out to get you. That's the explanation. Let me ask you this, how many people on this newsgroup do you think actually believe your invention is everything you say it is? From what I can see that figure is probably close to zero. (If you can point to a "true believer" to speak on your behalf, please do.) You might be curious why the people in this group aren't true believers. Let me help you out. You have made some extraordinary claims about the effectiveness, efficiency and low cost of your invention. As the saying goes, extraordinary claims require extraordinary proof. You have yet to present such proof (patents don't cut it). Its not just me saying that, its everyone.

As I have stated before, I think your ideas are brilliant and visionary and *if* they turn out to be real, you will undoubtedly become a very wealthy man and and the world will be a better place from your contribution. I don't have any ill-will towards you, but I don't know you from Jack. Just because you say you have done this, that or the other thing doesn't provide adequate proof that such things are true. That's reality and it goes for anyone. Its nothing personal. Really. Maybe everything you say is true. I just don't know. Maybe you will decide to post some convincing evidence. Here's

Re: H2 burner

hoping. I want to become a true believer.

So Mr. Mook, I will let you get on with your work. I don't think you are crazy, but if this past discussion is any indication, perhaps slightly unbalanced. Don't worry, its a small price to pay for genius. I look forward to seeing you on cover of Newsweek under the headline "World's Energy Problems Solved." I'm not kidding. Godspeed.
