In article <news:ccfgot11iub@news2.newsguy.com> I wrote (in part):
> *Within the last few years, however, one group has found a way to*
> *do it as a "net energy positive", and has gone commercial. See*
> *<<http://www.changingworldtech.com/>>. I will note that I have not*
> *been able to get any new information out of that web site for more*
> *than a month now -- the claim that the Carthage MO plant will be*
> *operational "in the next few weeks" has been there for at least a*
> *few weeks...*

After I posted that, I got curious and did some new searching and found a July 2004 "Discover" magazine update:
<<http://www.discover.com/issues/jul-04/features/anything-into-oil/>>.
This says the Carthage plant is occasionally running at partial capacity, after fixing numerous defects (mainly poor welds by a subcontractor). In addition, some "pre-engineering" (site survey?) work has gone on for building a second plant. ConAgra is apparently happy so far.
