I hope you're right..

So, think for yourself. What of the economic impact?

Sigh... There's no pleasing some people. economies routinely survive realignments as big as this one.

Please provide just one example.

How will the world's central banks increase money supplies in the face of diminishing resources?

The switch from a horse based economy to a gasoline based economy comes to mind.

The current switch from local production to international production of trade goods also seems relevant.

what makes you say that the resources will be diminishing?

.
