The DOGANIN SESI ASSOCIATION successfully secures grants each year from private foundations and public sources for projects that seek to protect and preserve the water and ecology of IZNIK(NICAEA) and the natural beauty of the watershed. These projects continue DOSES's efforts to build a sense of community involvement, heightened awareness and support. The job of preserving water quality is immense, but together we are making a positive difference in the future of IZNIK LAKE AND COASTS.

These lake-saving projects are the result of joint planning efforts of DOSES'S and various communities and agencies. They are developed and completed in cooperation with state and local government, property owner associations, citizen groups and individual volunteers. They involve investigation to identify problems, analysis and assessment of findings, planning or design of solutions, followed by implementation and/or education. Most importantly, these projects have helped create a positive atmosphere of responsible action and an awareness of what individuals and communities can do to make a difference for a better IZNIK LAKE.

Projects deal with VILLAGE PEOPLE EDUCATION and ENERGY SAVING PROJECTS , beach erosion and COAST GUARD, LAKE WATER sedimentation, sediment removal, FOREST enhancement, WASTEWATER disposal.
