4. it's possible to electrify fields right now

It's absurdly impractical.
Graham

well graham, that depends on the field. As applies to iowa unirrigated corn fiends, you are quite correct. as applies to california circle irrigated cropland, it would be a pretty small investment on top of the extant irrigation system. So.... Figure 20% of agricultural diesel could be replaced with electric, not a bad chunk to dig in 1 go.

.
