All vehicles need to be multi-fuel by mandate. Tariffs need to be removed from imported alternative fuels and fuel crops like sugar cane by executive order.

Then the one trillion dollars we give to the Arabs and terrorist oil producers will be diverted to poor third world agricultural countries and give us a diversity of cleaner fuels like ethanol, biodiesel, methanol and others. If every car burned everything, alternative choices will follow. Service stations would diversify offering gas and ethanol, gas and biodiesel, gas and methanol etc... We would be helping poor countries and our country, giving us options and drying up terrorist funds. OPEC just waists our money and helps no one.

.
