One that bypasses the electric company and runs on FREE ENERGY!

One that has a convenient EASILY REMOVABLE battery:

You drive home; take 20 seconds to wheel out (on a dolly) your depleted 50lb to 150lb battery from the car; wheel in the depleted battery into your large home photovoltaic panel; wheel into the car, a previously charged battery from your panel; drive 50 miles around town;

then repeat the above process. The whole process of exchanging the batteries takes only 20 seconds! (less than the amount of time it takes to unroll and plug in a power cord to a recepticle, then unplug it and roll it back up into the car with a built in battery)

The electric cars are already on the market! (unfortunately, none of the electric cars have convenient removable batteries)

The photovoltaic panels are on the market.

WHERE'S THE ABOVE PACKAGE AT MY LOCAL AUTO SHOWROOM- DAMN IT !!!!!

NONE OF THIS IS ROCKET SCIENCE !!!!!

note: you may wish to copy and send this post to an electric car manufacturer!

electric car manufacturers:
