D. Swanson wrote:

To all:

What is our country's energy policy? It is a national security issue is it not? The average Joe is getting raped over the barrel. Soon you will not be able to afford to drive to work. Why? Big oil is an established monopoly and they do not want competition eroding their powerbase nor do those in bed with them. You will suffer as they laugh their way to the bank. Tired of your rear getting humped?

Back in the 60's, President Kennedy said we will be on the Moon in a decade. We did it. We can be energy independent in 3 years. The technology is already here. It is all electric. Would you like a car or a truck with unlimited range? You would never need to fill it up? You can but who is stopping the progress? Greed.

Rise up my friends because you are the last resort. I've tried to open the eyes of government leaders to this technology and all I got was silence. I've tried to pass this on to the new presidential candidates and again, silence. This technology is simple and pollution free. The prototypes have been built. It could start a new industrial revolution in this country. Lots of Jobs. Lots of solutions. No more war over oil. Think about it. All we need to do is fast track and fund this technology and we would be free from the oil monsters. No more blood for oil!

Here is the website of this company trying to do what government can't or won't. America's freedom from oil is here:

<http://www.magneticpowerinc.com/>

Green energy is here! We as the human species can live in harmony if we can rid ourselves of selfishness. We are better than this! We can reach to the stars and one day money and power does not matter but the betterment of mankind and our self. If we will and desire, we can be our brother's keeper, hand in hand and achieve what was thought as impossible. We, the world, as one people. We have the technology now. Those that refuse this idea shouldn't be in fear, you will be cared for and accepted but your selfish ways destroy and prevent the promise of greater objectives. No

Re: Increasing energy costs

more blood and wars. No more suffering because of the logistics of food and water. Greed has nothing but service to itself and the human race wasn't designed for this.

That is my two cents worth and I am no way involved with this company. It's just a personal endorsement. So don't flame me for spamming.

I have a dream and I hope you can take action to make it happen with these words right in front of you. I hope I reached you and agree in spirit, please make it happen. I believe in hope and change without violence. Open your eyes and see the reality around you. Despite how you were treated in the past let us make a better future for the next generation because we can and you know it. Just like you learned to walk, it is just steps. Just make a step and change the world.

David

P.S.

With a few changes to chemistry and process procedures, we don't need oil for plastics either, it can be done with alcohol, the other hydrocarbon.

-----  
Some even believe we are part of a secret cabal working against the best interests of the United States, characterizing my family and me as 'internationalists' and of conspiring with others around the world to build a more integrated global political and economic structure – one world, if you will. If that is the charge, I stand guilty, and I am proud of it."

You mean that we can't sustain an extra \$5 trillion per year in the inflated cost of mostly fossil energy, with yellowcake soon enough to follow?
