Isn't it stange that God spends all His time and energy on a small handful of people on this tiny planet in our solar system----one star out of potentially "billions and billions of stars" in our galaxy----which, I assume, is also one of "billions and billions of galaxies" in the known universe----as Carl Sagan used to say? Perhaps the world wouldn't be in such a mess if He spent less time providing sunny days for church picnics and more alleviating the misery of the starving, the sick, the enslaved, the victims of oppression, for starters.
