Owwwww. Did I forgot ?

** Hoppy new year 2005, to everyone, PT or EE !!! **

BTW, from my slur humble-numble ignorant point of view, I've just no idea why Dinosaurs could not be BIGGGG ! So I really do not need to expand the earth to understand the dinosaurs. I watched the Animal Channel with the kids a couple of time, and I can figure out a giraffe gets hurt when it falls after a tranquilizing shot, but I've never seen an elephant getting a bruise this way, and it is bigger than the giraffe, so : why the Expanding Earth ?

sci.geo.geology: Re: Expanding Earth → Why did Achilles never reach the turtle ?

Now if some people feel that the poor dinosaurs would get hurt when they fall, and would then need an inflatable earth to walk on (as a kind of cushion ?) I suggest try some pataphysics experiment, like dropping the closest thing to the dinosaurs we have near at hand – a crocodile – from the fifth floor and see how many times it bounces, or so.

Then – of course, there is still the possssssibility (little little little... though) that Einstein missssed some interesting point in Expanded Relativity. So – maybe – there is an explanation to the dinosaurs not getting a bruise when running after each other in the muddy little earth.

The earth was not smaller, but time was slower.

So when the dinosaurs ran after each other in the mud, they thought :
GizzhowfastIamtheTRexwillnevergetme – but in reality, theyyyy weeeerrreeee
veeeerrrryyyyy slllloooooouuuuuwww aaaannnnndddd wwwwhhheeeennn
thhhhhhheeyyy haaaappppeeeennneeedddd ttttoooo fffaaalllll thhhheeyyy
neeevvveerrr ggoooottt huuuurrrttt !!!!!

But as everybody was vvveeeerrrryyy slow in these ancient times, they never noticed, and the Trex still had a hard time getting on some food 'cuz it was as slow as the others.

Nobody found where wuz de mizing BUCK, I reckon. I'll tell you if an EEer tells me how many times does a crocodile bounce from the fifth floor.

I'm – almost – sure I didn't insult anybody in this post.

...

I got nooo idea about earth spins and geology. yet I have an interest in having geology explaining dead people to me, and maybe some day tell me where not to go for holiday.

After a linear aggression (PT with me ! EEers out ! those not with me are against me !), and a retaliatory feedback, ... new computation, polynomial approximation of the dynamics of the group.... second order answer.

1) EEers, don't allow yourselves get polluted by the creationists. I read lovely things about dinosaurs on a half as small earth, because otherwise they would break their necks because of their own weighth. etc...

2) I like PT because I can *see* plates on the geography of the earth. That's enough to me. I just rely on necessary science. I just do not need EE to read an atlas. I just need PT.

3) maybe you lot have details as thin as those between Newton and Einstein to talk about, but my everyday geological life cannot perceive them. What I can perceive however is creationists pollution. It smells.

sci.geo.geology: Re: Expanding Earth → Why did Achilles never reach the turtle ?

4) maybe PT does not explain every thin detail but it works on average.

5) maybe you EEers can cut links with(creationists)... and rename the EE to something more appropriate, and continue working to explain what the PT can't explain. I saw something about the india–burma plate limit that needs in effect some positive explanation.

<http://users.indigo.net.au/don/ng/hulk.html>

I just can't admit lunatic goddists would explain the world to me.

!!! That's all folks !!!

I'll quit for a few days
