NO !

On the contrary there are two ways of preventing Earthquakes

1) Through the rain and in that occurrence, thanks to that wonderful California flood, probably Frisco escaped some mighty Quake bashing it to the ground again ! ... but why should I waste my time explaining why it is so, to brainwashed Glaciationzzzz , Continental Rafting & other types of Orogenesis in Solid Phase etc Gogologists ! Hey ?

In any case with the still worsening DDD (Divine Drudging Drought) reigning with absolute power in Australia, they can guess what is the writing on the wall for the Eastern border !

2) Through volcanic release, and St Helens blasting was a God Sent gift which prevented LA from being levelled out ! Let 's be thankful for that !

There are of course evident conclusions from the True Geology Arcane, beyond the grasp of the common brainwashed Universities Dudes !

Why not try to learn a bit of True Geology from me, Georges ?! It will give you insight then, regarding not only the past, but the most likely future and the way it's going to be shaped indeed ! Further the more, you will understand the genesis of the most recent 2 major quakes along the same harmonic arc of that wondrous Pacific Ring of Fire ; 8.4 South of Tasmania, then 8.9 north of Sumatra !

So you could , as well as I do presently , anticipate the next one half way through i.e. right on Sydney door step, since a mere 60 km out at sea. Obviously stronger too of course than the two before with a good hefty 9.2 estimate, and very soon too since I clearly see it to occur between 3 am and 9 am Monday next, 17th of January . Wonderful isn't Georges, since you as well as all readers not only know now where the next big one is going to strike ... BUT further more you know also the remedies as well !

Incidentally, I have computed that upraise of the Ocean floor through the last 8.9 Sumatra Quake. It went up fifty meters in two steps over at least

sci.geo.geology: Re: do floods trigger earthquakes?

3000 square km. We are there a long way from the imbecile Surrection / Subduction Théauriz of the Official Gogology Suckers of the ANU & Caltech & other MYTH , aren't we, Dork ? The coming 9.2 Sydney Quake on Monday 17th next is in this approach of the True Geology quite logical and those anticipation warning I have disclosed generously might save a few thousands lives indeed !

With kindest regards

PS By the way, those Sydney Blokes should be able now to feel the warning signs of the coming event. They are going to have Ringside seats this time !
