This is time lapse footage of the motion of Jupiter and Saturn.

Any person who sees the faster Earth, taking an inner orbital circuit, overtaking the slower moving planets of Jupiter and Saturn will become a heliocentrist. This is how Copernicus presented his insight to humanity over 500 years ago –

" In this arrangement, therefore, we discover a marvelous symmetry of the universe, and an established harmonious linkage between the motion of the spheres and their size, such as can be found in no other way. For this permits a not inattentive student to perceive why the forward and backward arcs appear greater in Jupiter than in Saturn and smaller than in Mars, and on the other hand greater in Venus than in Mercury. This reversal in direction appears more frequently in Saturn than in Jupiter, and also more rarely in Mars and Venus than in Mercury..... All these phenomena proceed from the same cause, which is in the earth's motion. Copernicus

Just as a faster car on an inner circuit on a roundabout witnesses slower cars on an outer lane appear to move backwards, what Copernicus did was drop the stellar background and accounted for the apparent backward arcs (retrograde) through the annual orbital motion of the Earth.

Newton destroyed all that in accounting for retrogrades by introducing an inappropriate and unnecessary observer on the Sun –

"For to the earth they appear sometimes direct, sometimes stationary, nay, and sometimes retrograde. But from the sun they are always seen direct.."

The 'scientific method' applied to astronomy is an intellectual

## Re-alignment of the heliocentric principle

holocaust with neither tribunal nor commission capable of dealing with the ins and outs of it. Presently, there is just me and I would hope the in pinpointing how the perspectives differ from the correct principles which originally determined heliocentricity through retrogrades, humanity can start to pick up the pieces and re-align astronomical principles back to their correct order and status.
