

Re: Seismogram question (the 7.0 off Japan yesterday)

Geez, we
figured
you
questioned
the
integrity
of the
USGS
spokesman
because
they are
employed
by the
federal
government
which
you
despise
so
much...

Jim
(also
one of
those
USGS
people,
speaking
only for
myself)

One cannot fail to
notice the
President's budget
notice when one
visits

the >>>U.S.G.S. site, can one? And there was
another site complaining about the >>>lack of
funding, but I can't be bothered to look for it at
the moment.

Re: Seismogram question (the 7.0 off Japan yesterday)

And please believe
me, when it comes
to the federal
government I don't

give >>>a shit. The target of my interests is
George Bush, and it is a purely

personal grudge of
behalf of my late
wife.

But on the other hand, those
who do need to worry about
your federal government might
like to read this, and I do
know this is Off-Topic, before
anybody tells me.

<http://www.911timeline.net/whatwouldyoudo.htm>

What would you do -- Go
through these 65 websites and
learn -- or turn

away? >>

I rather suspect you will turn
away, as always. It is
Off-Topic after all.

And if I worked for the U.S.G.S. I might
be asking myself wtf is going on here:

http://earthquake.usgs.gov/recenteqsUS/Maps/AK2/53.55.-166.-162_frames.html

particularly as the last one was a Mag
5.6 but you do seem to be spending your
time in newsgroups instead, and hey, it's

Re: Seismogram question (the 7.0 off Japan yesterday)

not my problem anyway. I'm downloading
Beatle's songs.

My guess is that the people who work in the
earthquake field are doing their jobs. Me, I deal
with water information database programming. And I
am quite capable of bouncing back & forth between
xterms full of coding and news browsers....

Jim

Oh good. Can you give me some information about the volume of
water per hour running into Mt St Helens crater then? I can
handle the maths myself, once I have some figures to work on.

No, I can't. I work on the database software that processes and stores
stream gage readings and computes discharge and other parameters. No data
sources I know of that are relevant to your question.

Jim

.
