I'm not deeply familiar with RealPlayeretc, but I don't think it's  
easy or obvious how to permanently record sound files from it – back to the  
"charge in some way for every time you play it" business model that DRM in  
general is trying to promote. So I'd guess that this RAWAVrecorder (bLOODY  
cAPSIOCK KEY!) is about making recording ... well, the name says it all.
