Yes. Go ahead, but I can't guarantee how long I'll keep them up. There was an confirmed F2 tornado that touched down in St. John, Kentucky, which is about 5 miles from where I was born (many of my mother's family are buried in the St. John cemetery there), and near Hodgenville. There were a few homes destroyed and a convenience store as well as at least one trailer, I believe. Also numerous barns and trees were leveled. There were also trees knocked down across U.S. highway 31W between Elizabethtown and Radcliff, near Ft. Knox. There may have been structural damage there as well. Closer to home here in Louisville, a funnel cloud was spotted near Campground road and Cane Run Road (less than a mile from my home). Trees were knocked down there as well, and a roof was blown off of a

Re: OT: Severe storm images

building to a chemical factory there (that factory is inside an industrial area called Rubbertown). About a mile further north, a tree fell onto a house, destroying much of the front portion of the house. There was no damage that I've discerned in my neighborhood, thankfully. All in all, it was a fast-moving, and rather severe storm, with high winds, marble-sized hail and larger, and torrential sideways rainfall (we got over one inch in about 5 minutes here with a total of about 1.5 inches total for the storm). I don't know how fast the winds were, but I estimate that they were over 60 mph here and possibly higher. There was also a funnel cloud spotted in northeastern Louisville, but no damage was reported.

However, I've heard reports that the worst damage was near Hodgenville, Kentucky, southeast of Elizabethtown, though I don't know the extent of the damage there. That is about all the information I have, other than that there were no reported injuries or deaths, thankfully.
