Did you see the news item about the guy who celebrated becoming the first man to swim a kilometer in the sea from the coast of Antarctica? He celebrated by swimming a mile a few days later.

The coldest I've ever been was after doing an ice dive to about 20ft in my caving wetsuit. Brrrr!, and a lot less than 13 deg C. Hell, I've spent about 4 hours of the last month contemplating taking a 3000ft swan dive into 5deg C seawater in the event of the rotors quitting.
