Cave diving isn't so bad. Good fun. Scary, but good. Hmmm, reading that, it must be a long time since I went for a bubble. I stopped diving in 1993.

Any particular reason, or just too busy?

Dead friends. Near-Death Experiences. Realising that I don't have the self-control to keep it together if it gets really bad. Plus being too busy and not being within 300 miles of a cave and my car dieing from the tin-moth.

By the wy, I've gotten a job prospect to do some geochemical sampling for an oil company. If I get the job, I'll be collecting samples in Montana (on the Blackfoot Indian reservation near Glacier National Park) and in South Texas.

Strange pairing. Must have got some new acreage. So you'll be doing groundwater sampling to look for covert seeps?

Don't know what the pay will be, be considering the harsh extremes of climates involved, and all the travel time, it had better be worth it.

Well, you can always address that at the interview, can't you <G>.
