Hi folks:

With no warning that I was aware of, UBC has decided to terminate their newsserver, suggesting that there are adequate free servers to be found which will suffice for those wishing to read usenet, though not providing any recommendation, just a pointer to a list of sites. I am currently trying one, freenews.netfront.net, so this is also a posting test,

Sorry, ignore this – I can't cancel it. This post failed when I tried to make it last week. I have since found a server that works, through aioe.org, and today I was just trying to clear the old article, which kept coming up as "postponed – post this article? y [yYAnq]" Hitting n or q had no effect, it kept coming back, so I tried A, and that posted it. If there was a way for tin to let me delete the article, I never found it...

Found myself in the same boat about three years ago, finally went with groups.google.com

Here is a list, quite old now

Access for many allows text to be both read and to post, a few even carry binary content, but are not reliable
